

# Press Release

**Struthers-Dunn, Inc** - a Leader in Relay Manufacturing and Innovative Designs announces their **New 88H Series** with options for LED and built in Coil Suppression Diode.

## **88H – Hermetically Sealed for Hazardous Locations Class1, Div 2, ATEX and IECEx Certified**

We are excited to launch the New 88H with **LED** Option that should be a significant asset when the relay is plugged into a panel that shows the Relay is energized when the **LED** is lit.

Most commercial relays with a clear plastic cover that have an LED only show that the coil has power to the relay, but that doesn't mean the relay is functioning!

When our **LED** comes on, it signals that the Normally Open contacts are now closed! That gives information to the observer that the relay is functioning and the connected circuits are receiving the power from the relay contacts connected to the circuits they control.

- **Coil Suppression Diode for DC coils**, can be built into the relay—You don't need the added cost of a special socket with an add-on module for the Coil Suppression Diode.
- 2 and 3 pole relays will work in **any** 8 or 11 Pin Octal socket.
